- 3 • Methods
- 4 • Team & Strategy
- 5 • Plan & Effect

Overview

Due to the Covid-19 Situation, Schools and Universities (including SKKU) open online classes.

Then, how is the exam going?

1

Overview

Currently using platforms

LearningX/Canvas/iCampus

For taking exams

Video conferencing apps

For Supervision - Ex) Webex

Overview

Market research

Q1 Have you ever participated
in real-time online exams?

: Yes → Q2

Q2 Are you satisfied with the
real-time online exam?

: Okay / Poor / Very poor → Q3

Q3 What inconvenience did you experience?

- Network Connection error
- Application Loading Problem
- Cheating Issue
- Etc.

1

Overview Problems

Use too **many resources**
Ex) RAM, Internet, etc.

Can be a **burden** to
device with **low specs**

Complicated

Resource-hogging coming from **bloat**
Ex) videos of other students

Not necessary for exam

Slow

Lag and Webex **crashing**
Can **fail** the exam

Cheating

Muted mic dilemma
Muted : easy to cheat
Unmuted : distracting

Can **circumvent monitoring** using a **blind spot**
Screen sharing + webcam is not enough

Difficult

Strict Rules
Showing both monitor and body

Can cause **awkward position**
Hard to **place camera**

Goals

2

Goals

Final Goal

Simple, Easy, Fast, Fair

Online exam management application

Simple, Easy, Fast, Fair

Reducing the burden on the RAM

Developing the Web/App program to take an exam

Implementing an ability that deliver live video / voice

One-to-one connection between a student and the TA

Cheating prevention – ex. Monitoring students' movements

Providing records of the exam process and video of students

Supportive UI for easier management in university's perspective

Team & Strategy

4

Team & Strategy

Team formation

Kyunghee Ko

Android/iOS UX/UI development

Designing the Android/iOS structure

Hyungjun Joo

Design web app design

Designing the structure and design of the application

Android/iOS

Web-based

Luke

Android/iOS app development

Implementing Android/iOS app functions

SKKUEM
Development

Seungyeon Cho

Web app development

Implementing the function of the application

Server

Jeongmin Lee

Computer-vision based developer

Developing a program that detects user behavior

Eunsu Kang

Network development

Developing a function that supports 1:1 connection between users and servers.

4

Team & Strategy

Quantitative evaluation of goals

Indicator	Quantative	Importance
Survey on the convenience students after using the program	80%↑	20%
Survey on the convenience of assistants after using the program	80%↑	20%
The percentage of cheating activities that occurred after using the program	3%↓	30%
The percentage of ram usage compared to webex	70%↓	15%
The percentage of network error or application - force- quit compared to webex	50%↓	15%

Plan & Effect

Plans after development

Expanded application

Can take **offline exams** remotely
Ex) national examination, certified exam

Even if **Unavoidable / Unexpected circumstances** occurs

Ex) accident, family funeral, natural disasters

Fix weak points

Development of smartphone's **camera**

→ Can see **wider range**

Development of **computer-vision** technology

→ Get **higher accuracy** of detecting strange behavior

5

Plan & Effect
Benefit

TAs & Professors

- **Easy to manage** students while taking exam
- **One-to-one** monitoring possible
- **Automatically save** recorded video during the test
- **No need to detect** strange behavior themselves

Students

- Can take exam on **offline mode** even if a network error occurs
- Don't have to **doubt** others' **cheating**
- **Reduce the burden** of online exams
- **Minimize** the function runs on students' application
- Don't worry about **RAM problem** - Ex) Turn off automatically
- **One-to-one** connection with an TA

Thank You
